Findings by Severity

3. Action Plan

Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **alieninc.tech** for a **Multi-company operating group / AI infrastructure (corporate umbrella)** site, generated on October 17, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

74/100

SEO HEALTH SCORE

Critical Issues Found:

1. Homepage + article index are well-structured with valid Organization schema, 868 words, 96/100 content quality, and solid security headers
2. 120 of 357 sitemap URLs lack a canonical tag; 115 lack Open Graph and Twitter Card meta
3. 112 pages have no meta description; 46 pages have no H1
4. llms.txt returns 404 — Lighthouse agentic readiness drops the audit
5. robots.txt deliberately blocks 10+ AI crawlers (GPTBot, CCBot, PerplexityBot, Google-Extended), contradicting GEO/AI-search goals

Quick Wins:

1. Publish /llms.txt with H1 + summary + markdown links to all 7 company portals
2. Decide AI-crawler policy: if GEO/AI Overviews visibility matters, allow Google-Extended and PerplexityBot (keep GPTBot/CCBot blocked if preferred)
3. Add meta description + canonical + OG/Twitter tags to the 115 pages that lack them (extend tools/inject-seo.py pattern to non-subdomain pages)
4. Remove or fix the /trust/index.html 404 in the sitemap
5. Set logo.png alt to a meaningful value (e.g. 'Alien Inc logo') or alt="" if purely decorative

2. Audit Categories

2.1 Technical SEO

Score: 78/100

What Works

- sitemap.xml found and serving 357 URLs (urlset format)
- robots.txt reachable, well-commented, blocks admin/api/vault paths
- 356/357 URLs return 200; proper 404 page with noindex for unknown URLs
- HTTPS + HSTS preload, CSP, X-Frame-Options DENY, nosniff
- Cloudflare + Fastly CDN caching in front

Findings

120 pages missing canonical High

Crawl of 357 sitemap URLs found 120 without <link rel=canonical>.

Recommendation: Self-referencing canonical on every page; extend tools/inject-seo.py beyond the 8 subdomains.

Sitemap lists a 404 URL Medium

https://alieninc.tech/trust/index.html returns 404 but is in the sitemap.

Recommendation: Remove from sitemap.xml or restore the page.

Duplicate titles Low

articles/2026/09/24/The-Alien-Minds-We-Built.html and articles/2026/09/24/index.html share the same title/ description; panteon login.html and secure.alieninc.tech also share 'Panteon — Secure Portal'.

Recommendation: Canonicalize one variant per pair.

2.2 Content Quality

Score: 92/100

What Works

- Homepage: 868 words, quality 96/100 (filler 0, AI-pattern 0, density 1.00)

- Strong E-E-A-T signals: founder page, founding date, legal name, named founder in schema
- Specific, verifiable claims (compliance frameworks, founding date 2016-12-22)

Findings

112 pages missing meta description High

31% of indexed pages have no meta description, forcing Google to auto-generate snippets.

Recommendation: Write 120-155 char descriptions for all key pages; automate via inject-seo.py.

46 pages missing H1 Medium

Mostly panteon.alieninc.tech subpages (yono-forge, pipeline-builder, cmb-* pages).

Recommendation: Add a unique H1 to each page.

2.3 On-Page SEO

Score: 70/100

What Works

- Homepage has canonical, OG, Twitter Card, Organization JSON-LD
- Title tag is clear and branded: 'Alien Inc. – Guardian of Philippine Digital Infrastructure'
- Single H1 on homepage (good hierarchy)

Findings

115 pages missing Open Graph Medium

No og:title/og:image on 32% of pages — poor social/LinkedIn/Facebook preview control.

Recommendation: Add OG + Twitter Card tags site-wide.

logo.png alt='•' on every page Low

Brand logo uses a bullet as alt text — bad accessibility and a missed image-SEO signal.

Recommendation: Use alt="Alien Inc" or alt="" (decorative).

2.4 Schema / Structured Data

Score: 85/100

What Works

- Homepage Organization JSON-LD is valid: @id, legalName, foundingDate, founder Person, sameAs (6 profiles)
- Crawl found 38 WebPage, 4 Organization, 1 AboutPage blocks across sampled pages
- 1 block per homepage, valid, 3160 bytes

Findings

> **110 pages missing structured data Low**
>
> Most article and product pages carry no JSON-LD.
>
> **Recommendation:** Add Article schema to /articles/, WebSite schema sitewide, BreadcrumbList on nested pages.

2.5 Performance (CWV)

Score: 70/100

What Works

- Served via Cloudflare + Fastly, gzip, cached edges in MNL
- Static HTML (no SPA shell detected), no JS render required for primary content
- Cache-Control: max-age=600 + Age header present

Findings

> **No CrUX/PSI field data collected Info**
>
> Google PageSpeed/CrUX APIs require an API key that isn't configured, so lab/field CWV were not measured.
>
> **Recommendation:** Configure GOOGLE_API_KEY to enable pagespeed_check.py for real INP/LCP/CLS numbers.

> **Fonts loaded from Google Fonts with preconnect Info**
>
> fonts.googleapis.com + fonts.gstatic.com render-blocking CSS.
>
> **Recommendation:** Self-host fonts or add font-display: swap to protect LCP.

2.6 AI Search Readiness

Score: 55/100

What Works

- Primary content readable without JavaScript (agentic_check P0 pass)
- robots.txt reachable; unknown URLs return real 404
- WebMCP tools annotated on forms (P2 info)
- Content-Signal preference declared

Findings

llms.txt returns 404 High

/llms.txt is not published. Lighthouse drops the agentic-readiness audit from its fraction; publishing one adds a counted pass.

Recommendation: Publish /llms.txt with an H1, a '>' summary, and markdown links to all 7 company portals and key pages.

robots.txt blocks 10+ AI crawlers High

GPTBot, CCBot, Google-Extended, anthropic-ai, Claude-Web, cohere-ai, PerplexityBot, Bytespider, Diffbot are all Disallowed. Blocking an AI search crawler removes the site from that engine's answers.

Recommendation: Confirm intentional. If GEO/AI Overviews visibility is a goal, allow Google-Extended and PerplexityBot; keep training bots (GPTBot/CCBot/Bytespider) blocked if desired.

ai-catalog.json / A2A agent card absent Info

Agentic Resource Discovery and A2A agent card endpoints are not present (na).

Recommendation: Consider publishing /ai-catalog.json and /.well-known/agent-card.json to be discoverable by AI agents.

2.7 Images

Score: 60/100

What Works

- Only 1 image on homepage (logo) — minimal payload
- OG/Twitter image strategy in place on main pages

Findings

logo.png alt text is '•' Low

Brand logo has a non-descriptive bullet alt on every page.

Recommendation: Set meaningful alt or empty alt if decorative.

---

3. Action Plan

Phase 1: Critical Fixes Week 1

- Publish /llms.txt (H1 + summary + markdown links to 7 portals)
- Resolve AI-crawler robots.txt policy (align with GEO goals)
- Remove or restore the /trust/index.html 404 in sitemap
- Fix logo.png alt text

Phase 2: High-Impact Improvements Weeks 2-3

- Add meta description + canonical to the 112/120 pages missing them
- Add OG + Twitter Card to the 115 pages missing them
- Add H1 to the 46 pages missing it
- Canonicalize duplicate title pairs

Phase 3: Content & Authority Month 2

- Add Article schema to /articles/ and WebSite/BreadcrumbList sitewide
- Configure GOOGLE_API_KEY for CrUX/PSI field data
- Self-host or font-display:swap the Google Fonts
- Publish ai-catalog.json + A2A agent card for agent discoverability

Phase 4: Monitoring & Iteration Ongoing

- Run agentic_check.py monthly to track readiness score
- Re-crawl sitemap after each deploy to catch regressions
- Track Google updates via seo_updates.py to stay current

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO (Google SEO Intelligence Skill), October 17, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
